### DETAILED ACTION

1. This Action is in regards to the Amendment and Response received on 19 September 2005.

#### *Continued Examination Under 37 CFR 1.114*

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 19 September 2005 has been entered.

3. The application has been examined. Claims 1-30 are pending. The objections and rejections cited are as stated below:

#### *Claim Rejections - 35 USC § 102*

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. **Claims 1-30** are rejected under 35 U.S.C. 102(e) as being anticipated by Kloba et al. (Kloba), U.S. Patent No. 6,839,744.

6. Regarding independent claims 1 and 6, (exemplary independent claim 1), Kloba discloses a method to synchronizing a computing device and a server, comprising retrieving a record

Art Unit: 2143

extraction sequence identification (ID) from the server, providing the record extraction sequence ID to the computing device (Kloba teaches sending to the client a data marker that is used in the synchronization process as a way of identifying state of data in the client), [see Kloba, Col. 18, lines 10-15]; and extracting from a database records that have been changed since a prior synchronization if the record extraction sequence ID matches a previously obtained record extraction sequence ID, wherein the extracted records are not already stored on the computing device [see Kloba, Col. 18, lines 28-67, Col. 19, lines 3-39, Col. 20, lines 29-50]. However, Huang does not explicitly disclose

7. Regarding dependent claims 2-5 and 7-10, the limitations of these claims are taught within the figures of Huang.

8. Claims 11-20 list all the same elements of claims 1-10, but in system form rather than method form. Therefore, the supporting rationale of the rejection to claims 1-10 applies equally as well to claims 11-20.

9. Claims 21-30 all the same elements of claims 1-10, but in system form rather than method form. Therefore, the supporting rationale of the rejection to claims 1-10 applies equally as well to claims 21-30.
